

BIRD SPIKE

BIRD SPIKE

Type : BS 1

Bird Spikes - Stainless Steel and Polycarbonate Needle Strips

Roosting birds can cause a number of problems. Without bird spikes installed, birds will naturally fly to landing areas such as roof tops, roof ledges, windowsills, rafters, building projections, signs, statues, and trusses. Bird Spikes are one of the most effective products to keep birds off these surfaces

Birds can cause structural damage, noise problems, as well as aesthetic damage from nesting and droppings (which is also a serious health concern for humans). The BS1 Spikes series have been proven to be effective bird deterrents by keeping birds away from roosting spots, protecting your investments and health.
